

Test Engineer

Location: Becrypt Head Office (London, Victoria)

Responsible to: QA Manager

Job Purpose:

We are looking for a super-sharp Test Engineer to work in our Agile development teams. You will be working in a great atmosphere on stimulating projects with other talented test engineers.

We will need you to provide high quality testing services to the engineering team, working with other testers assigned to a project.

You will be working closely with developers and the product owner. Our testing work involves gaining a deep understanding of the product so that you can focus your testing activities.

Principal duties and responsibilities:

- Gain a deep technical understanding of the product you are testing to and expert user (administrator) level
- Working with developers, other testers and product experts, write effective and efficient tests
- Carry out both formally scripted and exploratory testing
- Actively participate in peer reviews, sprint planning and other project group activities

Essential Skills and Experience:

- Minimum one year experience working as a tester
- Knowledge of Microsoft web technologies
- Demonstrable ability to write efficient and effective tests
- A strong interest in the technical side of information technology and software development
- Debug / troubleshooting skills
- Excellent communication, both written and verbal

Desirable:

- API testing

Qualities:

- Team player
- Excellent communicator
