

## Software Engineer (Web)

**Location:** Remote Working/Becrypt Head Office (London, Victoria)

**Responsible to:** Architect, Device Management

### Job Purpose:

To design and develop features on our existing device management platform, which is currently being used to manage iOS, Android and our flagship Paradox products in a number of organisations. The role will require working across the full web development stack from UI, to web services, to backend coding, with opportunities to work with Docker and micro services.

### Principal duties and responsibilities:

- Produce designs for new features and design web based user interfaces
- Write, test and maintain software code as according to design specifications in a quality and timely manner
- Troubleshoot and resolve bugs
- Perform code reviews and write documentation
- Mentor junior team members
- Providing breakdown, estimate and progress information
- Capture and fulfil requirements for Project Manager and Team Lead
- Support QA to ensure the product is of good quality
- Assist with customer escalation cases
- Any other reasonable duties as required by the business

### Essential Skills and Experience:

- 3+ years Microsoft ASP .NET experience
- C#
- Microsoft ASP .NET MVC / WebAPI
- Entity Framework
- RESTful web services and JSON
- In depth knowledge of Microsoft Web technologies
- Javascript and JQuery
- HTML/CSS

### Desirable Skills and Experience:

- .NET core
- T-SQL
- Mobile device management
- Web security

- Docker
- Degree in computer science or another closely related subject

## Qualities:

- Team player
- Excellent communicator
- Attention to details
- Sense of humour
- Problem solver
- Self-motivated
