Delivering

# High Assurance

Becrypt provide High Assurance solutions that enable secure collaboration across governments and partners. Our innovative technologies have been developed with government, to enable Zero Trust integration across high-threat multidomain environments. Our range of interoperable Cross Domain, Endpoint Device and Mobile products and services are Secure by Design - from concept to deployment.

## Why Choose Us?

- Becrypt has over 20 years of experience in software product development and services.
- Becrypt adopts agile methodologies to enhance flexibility and responsiveness.
- Our products are developed following rigorous processes for high assurance, ensuring the highest level of security and trust for your organisation.
- We are customer-focused, delivering solutions that are user-friendly without compromising on the highest standards of security.

## Research

Becrypt work with a number of government departments supporting research programmes related to both emerging threats and new technologies relevant to high assurance cybersecurity. This could be through a paper based research exercise through to low Technology Readiness Level (TRL) outputs.

## Bespoke Software Development

We leverage our broad range of software capabilities, from low-level system engineering through to web technologies, to support both stand alone and collaborative high assurance software development programmes.

## Products and Services

We transform our research outputs into high assurance cyber security products and services, ensuring they are effectively deployed and meticulously maintained to meet the highest standards of security and reliability.
